

## **ABSTRACT**

The present invention provides for an original document indication device. The device contains a document creating portion for creating a document on a medium; a counterfeit countermeasure transferring portion for creating an original  
5 document indication on the medium; a transporting means for transporting the medium; and a controlling portion for controlling operation of the document creating portion, the counterfeit countermeasure transferring portion and the transporting means based on signals which are input from an operating portion; wherein an  
10 original document indication is created as the medium is transported by the transporting means through the document creating portion and the counterfeit countermeasure transferring portion.
